

enabler⁴BIZ® Reporting and Key Figures

To embed an integrated Management System into an IT landscape the best possible way, not only the provision of specifications is important, but also the complete documentation of evidence as well as reliable controlling structures. And for these tasks, too, we can offer you support – with the enabler⁴BIZ-module “Reporting and Key Figures”.

The component “Reporting and Key Figures” enables the connection to external data sources or the embedding of existing reports to the management system. This information integration enables the access to data sources via SQL or ODBC queries, which makes the connection to data management systems of different manufacturers possible. Naturally, any data from your enabler⁴BIZ can be evaluated that way.

Choose one from three different efficient reporting techniques – the one that best fulfills your requirements:

- ▶ **enabler⁴BIZ Key Figures:** Key figures are displayed in connection to the process visualization
- ▶ **enabler⁴BIZ Report** based on a specific template for Microsoft® Excel®
- ▶ **SQL Server Report** with the help of Microsoft® SQL Server Reporting Services®

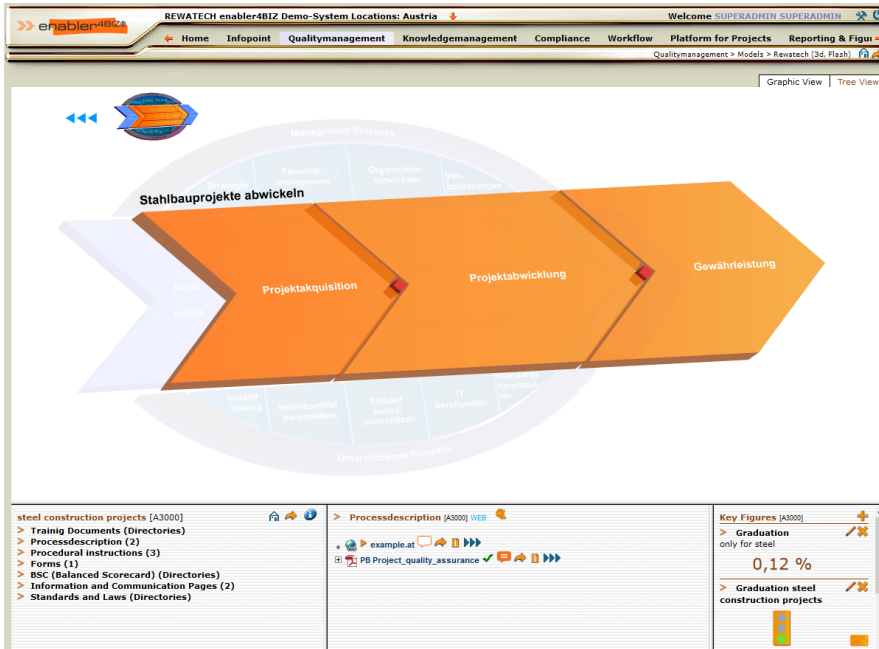

enabler⁴BIZ Reporting and Key Figures

- ▶ **One Goal:** Efficient and fully integrated Controlling – beyond the boundaries of the enabler⁴BIZ
- ▶ **Three Paths:** Customizable, flexible and no threat of manipulation

ONLINE-
DEMO SYSTEM:

enabler⁴BIZ Key Figures

The enabler⁴BIZ key figures are an easy and transparent possibility to display process key figures directly for each process – that means as part of the visual depiction through the process model of the enabler⁴BIZ. For every call up of a process, the key figures are calculated anew and are thus always current. The data source can be defined separately for every key figure. The source of the data may either be the database of the enabler⁴BIZ or also any other database of the company. Furthermore, it is possible to use a number of data (text files, XML, Access-files, ...) for data provision. Additionally, enabler⁴BIZ reports may be used for a more detailed evaluation for every key figure.

Easy and **flexible confi-guration** make the enabler⁴BIZ key figures a unique controlling tool:

- ▶ The activation is possible for every process separately.
- ▶ For every process, any number of key figures can be set up.
- ▶ Authorization management and location allocation for each key figure
- ▶ Embedding the enabler⁴BIZ report for detailed evaluation, as well as trend analysis of each key figure

A number of **data sources** make the enabler⁴BIZ key figures a flexible and irreplaceable tool for everyday work:

- ▶ Text files
- ▶ XML files
- ▶ enabler⁴BIZ Database
- ▶ Other SQL Server Databases
- ▶ Microsoft Access Databases
- ▶ Microsoft Excel files
- ▶ ODBC Interfaces

The return values can be displayed in the following **formats**:

▶ Text **Fa. Muster, 1030 Wien**

▶ Number **1734 Offers**

▶ Percentage **0,12 %**

▶ Traffic lights, with limits defined for Green and Red

▶ Currency **€ 48.735.000,00**

enabler^{4BIZ} Report

Link the simplicity and the transparency of the enabler^{4BIZ} with the performance of Microsoft® Excel®!

The enabler^{4BIZ} Report is a Reporting Framework based on Microsoft® Excel®. You can create your reports yourself – the only prerequisite is a corresponding level of SQL knowledge to make a database query required for the report. For this, the query is pasted into a template created for Microsoft® Excel® and saved in the enabler^{4BIZ}. When calling up this template via the enabler^{4BIZ}, the query is made and the resulting data given in a Microsoft® Excel® worksheet in real time. On further, customizable Microsoft® Excel® worksheets, the resulting data is aggregated, evaluated and if required, graphically mapped. These worksheets are available to the user for further use.

Efficient provision and distribution via the enabler^{4BIZ}:

- ▶ Easy connection via a platform page of the enabler^{4BIZ}
- ▶ Allocation to processes in the graphic process visualization of the enabler^{4BIZ}
- ▶ Parameterization by the user for the restriction of the evaluation
- ▶ Easy authorizing for controlling which persons may use which reports
- ▶ Automatic execution of the report
- ▶ Automatic e-mail to pre-defined users at freely definable times
- ▶ Automatic storage in a directory

The following **data sources** are available for the creation of enabler^{4BIZ} Reports:

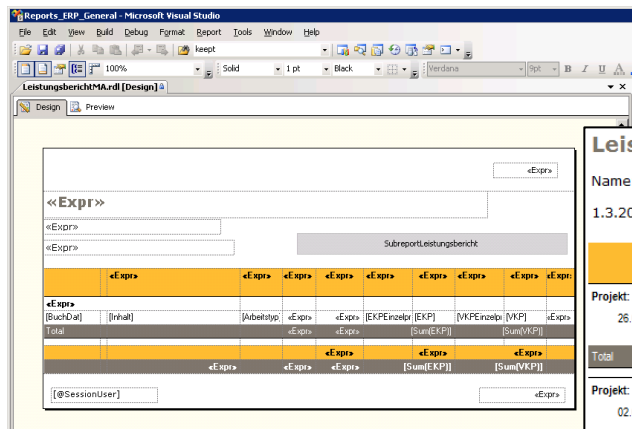

- ▶ enabler^{4BIZ} Database
- ▶ Other SQL Server Databases
- ▶ Access Databases
- ▶ ODBC Interfaces
- ▶ Other data sources upon request

Microsoft® Excel® – as optimum tool for data preparation and visualization:

- ▶ Ready-made templates for the definition of the data query
- ▶ Import of data when calling a report into an own worksheet
- ▶ Preparation of data on any number of further worksheets
- ▶ Use of all possibilities in Microsoft® Excel®, for example
 - ▶ More than 400 functions from the area of statistics, financial mathematics, date and time, etc.
 - ▶ Diagrams
 - ▶ Pivot tables
 - ▶ Interim results
- ▶ Completed reports can be extended, amended or refined at any time.

SQL Server Report

The SQL Server Reports are based on the Microsoft® SQL Server Reporting Services®, which are part of the Microsoft® SQL Server®. The reports created according to your specifications are created by us with the help of Microsoft® Visual Studio® and made available in your system. The ready-made report templates thus make reports available quickly to your users, which are furthermore sent automatically via e-mail or may be saved. Manipulations to the reports or the data material can thus be ruled out. Further processing of the data is naturally nevertheless possible via the interface to Microsoft® Excel®.

- Restrictions of the data evaluation by the user via parameters
- Export as xml, csv, pdf, tiff, doc or xls

- Precisely pre-formatted reports
- Creation of the report according to your specifications

The **provision** of the reports takes place via an own platform module of the enabler^{4BIZ}. The enabler^{4BIZ} reports can furthermore be made directly available from the process model itself. The administrator thus has all usual possibilities for flexible and dynamic information and communication management in the enabler^{4BIZ}:

- Flexible authorization concept
- Provision of report templates on flexible platform pages
- Combination of the reports with other platform modules to complete the information strategy
- Automatic creation of reports (Storage in a directory, dispatch via e-mail)
