

The enabler<sup>4BIZ</sup> enables the integration of various scopes into a user-friendly, web-based software solution due to its modular design. A platform across locations – customized interface – many professional solutions.

Not only due to the web-based access to the enabler<sup>4BIZ</sup>, but also the clear and central management of data, the user has the possibility to access all relevant contents and information quickly and independent of his location.

Our professional solutions are supported by an efficient and customer-focused support center that offers personal and solution-oriented support and advice. The support services are defined via Service Level Agreements and standardized according to ISO 20000.

As Microsoft Partner (Silver Application Development), Logic4BIZ has proved its competence through selected references and tests of Microsoft Technologies and employs highly qualified employees who receive ongoing training in working with current Microsoft Development Technologies. The knowledge and the up-to-dateness of the references are checked yearly by Microsoft. The constant access to Microsoft resources in the area of support, training, development and testing enables Logic4BIZ to develop excellent and secure solutions. To ensure the highest possible security of the enabler<sup>4BIZ</sup>, the ongoing further development takes place according to specifications of the ÖNORM A 7700.

## What our customers say

- ▶ "The visualization of the processes and the intuitive access to information via the enabler<sup>4BIZ</sup> have contributed majorly to the process thinking of our employees!"

Ing. Robert Dick, Member of the Management, Mayer & Co Beschlage GmbH (MACO)

- ▶ "With the enabler<sup>4BIZ</sup>, we were able to improve the consistent availability of the standards and information in our group organizational system on a transnational level, too. This makes internal communication easier."

Gerhard Wohlmuth, Quality, Security and Environmental Management, HABAU

ONLINE-DEMOSYSTEM:  
<http://www.enabler.info>

▶ **(Quality) Management System**

The individual depiction of the information with the process visualization enables easy availability of all relevant information. The non-conformist document maintenance and control ensures that only checked, released and current documents are made available to the employees. The enabler<sup>4BIZ</sup> as (Quality) Management System supports the implementation and check/review of tasks within the company actively, whereby sustainable corporate development according to the continuing improvement processes is ensured. The integration of key process figures complements the system and closes the circle to the measuring of the processes. With the help of reporting functions, the processes can be visualized and measured.

▶ **Project Platform**

This solution enables teamwork across locations through freely definable contents via individual work space design. The easy use – supported by the central administration – enables consistent communication and documentation. Internal and external users can be notified of changes to the project platform automatically.

▶ **Workflow Solution**

With the help of extensively customizable workflows, the operational processes are structured and managed effectively. The processing and lead times are accelerated by fully electronic registration, recording and archiving. The overview of the current status of the workflow is given at any time.

▶ **Compliance Management System**

With the help of structured depiction of e.g. legal regulations, notices, contracts, norms and obligations, clear deduction and tracking of measures is enabled. Hereby, professional support of employees, commissioners and managers of a platform is ensured. Clearly structured and up-to-date, the authorized users have access to the relevant contents. Clear and transparent reports complement the range of services of this Compliance Management System.

▶ **Knowledge Management**

This solution enables clear and transparent provision of knowledge and information as well as their integration into process visualization. Through the combination of freely definable forms and efficient database systems, numerous application possibilities besides the knowledge databases (such as Risk Management and Ticket Systems, Notice Registers and Contract Registers and many more) can be implemented. Also, polls can be provided on short notice and transparently.

## Further functions of the enabler<sup>4BIZ</sup>

▶ **Customer Relationship Management (CRM)**

Enables clear management of customer and address data as well as planning, tracking/monitoring and documentation of contacts. With the help of personal memory function, no tasks are missed/overlooked and the acquisition task is clear and documentable.

▶ **Enterprise Resource Planning (ERP) for Service Providers**

This solution supports project-oriented work through time-based planning, recording and settlement of services. Hereby, complete cost allocation is ensured and the payment flow in the company is optimized – supported by thorough controlling functionalities. The web-based solution enables the easy introduction and use outside of the company as well.

### What our customers say

- ▶ “We have been using enabler<sup>4BIZ</sup> since 2007 to our utmost satisfaction. Through its introduction, we were able to provide all areas and employees of our company with the current documents quickly and efficiently. Through the workflow, new documents are added or existing ones edited. Therefore, complete traceability is given at any time.”

Arnold Kuss, Quality Representative, Wild GmbH
